

Moderator installation Art. 4260

Loosely assemble the aluminum profiles with the enclosed screws, press the two black plastic mushrooms from the inside into the lateral mounting holes and attach the Bowden cable nipple to the rear hole of the moderator rail with the small threaded screw.

Adjust the profile length so that the black plastic bearings between them fit on the right and on the left.

Now mount the profiles including the bearings with 2 screws (4x30mm) through the guide mushrooms on the side walls.

Mount the moderator lever under the game table (Spax 4x20mm).

Pull the Bowden cable up the side wall and fasten the eye bolt at a suitable point.

Attach bowden cable abutment (slotted wooden strip) below the attached rail (Spax 4x30) and adjust the Bowden cable, then screw on the nipple.

Tighten all screws and cut the moderator felt to length and glue to the rail.
